India	72K
United Kingdom	54K
Germany	38K
Canada	38K
France	27K

What makes **CG Channel** different?

High-quality editorial content

CG Channel features impactful interviews and insights from professional production artists and daily news updates on the latest creative technologies.

Focus on education and training

CG Channel is part of the Gnomon group of companies, which is focused on inspiring and empowering entertainment production artists.

> We serve 3-million-plus page views on average year over year to an audience of primarily 24 – 54-year olds

The CG Channel Team

Jim Thacker

Editor, CG Channel

Formerly the editor of *3D World* magazine, Jim curates and writes CG Channel's news, features, and interviews.

Lynette Clee

Dir. Business Dev, The Gnomon Workshop

Lynette oversees the advertising and website development for CG Channel.

Alex Alvarez

Owner, CG Channel, Gnomon School & The Gnomon Workshop

Alex is the Founder, CEO, and visionary behind the Gnomon companies.

Jason Lewis

Contributing Writer, CG Channel

Jason is an Environment Art Lead at Team Kaiju. He conducts reviews of software & hardware for CG Channel.

CG Channel Audience

CG Channel's expertly written and highly curated editorial content and news updates draw a consistently influential audience, including studio executives, creative professionals, producers, and entertainment artists primarily working in visual effects, games, and animation.

CG Channel only shows advertisements that are of interest to our audience. We never sell links or host irrelevant content.

Our audience can trust that we will only ever serve them professionally edited content with value.

➤ Our articles are consistently popular with technophiles, and media and entertainment lovers.

The screenshot shows a news article titled "Unreal Engine 5.2: five key features for CG artists". The article features a video thumbnail for "Unreal Engine 5.2 Feature Highlights" and a list of five key features:

- 1. PCG: new tools for populating large open worlds**
One of the biggest new features in Unreal Engine 5.2 is the Procedural Content Generation Framework (PCG), an experimental toolset for populating large scenes inside Unreal, without the need for external tools.
According to Epic, the PCG lets artists "define rules and parameters to populate large scenes with Unreal Engine assets of their choice, making the process of creating large worlds fast and efficient".
It includes both in-editor tools, including a new node graph and a set of operators, and a runtime component.
Workflow is interactive, with changes made in the node graph editor updating a project in real time.
At the time of writing, the documentation for the PCG doesn't seem to be live, but you can read a technical overview on the [Unreal Engine public roadmap](#) and find more details in [this video](#) from GDC 2023.
- 2. The release lays the foundations for two major new toolsets: the Procedural Content Generation Framework (PCG) for populating large scenes inside UE5, and Substrate, a modular material-authoring system.**
- Other changes include Chaos Flesh, a new real-time muscle and soft body simulation system, support for simulation caching in the Niagara effects toolset, and updates to Nanite, Lumen and the path tracer.**
- As usual, there are smaller changes throughout Unreal Engine's key toolsets, including modeling, UVs, texturing, lighting, animation, physics and rendering, plus new features for virtual production and mixed reality projects, updates to the Datasmith toolset and USD workflows – and native Apple Silicon support.**
- To save you wading through thousands of words of release notes, we've rounded up five of the key new features in Unreal Engine 5.2 for CG artists, as opposed to programmers.**
